

## Client Update

October 3, 2008

Well, the third quarter ended with a bang. The transformation of the financial landscape continues unabated. The S&P 500 fell 9%, and the credit crisis continues as the U.S. House of Representatives wavered for the week until finally passing the "Wall Street Bailout Bill" today. Perhaps if someone in Washington understood a little bit about marketing, they would have picked a better name for the bill! And could they have paused in their name calling and finger pointing for 10 minutes to get the job done? Sorry, there I go again...

Good news, I think. Warren Buffett has finally decided the market is low enough for him to step in and take some very large positions (e.g., Goldman). Perhaps even more telling, Wells Fargo is stepping in front of Citi, and without the government support Citi had asked for, to acquire all of Wachovia. These relatively conservative investors/businesses are expressing confidence, and are acting on a belief that the values on display are very low. Meaning that they believe the future will be good, to put it in simple terms, even if the road ahead is rocky for a while.

Please take a look at the attached slide, showing how quickly and decisively markets have recovered in the past from major negative events. We have all just come through a three year bear market, climaxing in 2002. Back then we observed many (not our clients!) "capitulating" at the bottom, selling out just before the recovery.

Are you observing bankers, brokers and retail investors going to cash in a panic? Yes. Is that a good idea? No. These people get killed every time -- don't join them! That selling behavior is the flip side of the buying behavior we see when markets have been climbing for a long time. People routinely give in to fear and greed, and they pay a heavy price.

I hope this is helpful and that in a few years we will be looking at a nice recovery together. You will be glad you did not make a mistake when the pressure was on. We are here to support you; let's talk soon.
